

### Installation Diagram for Shower Panel

1. Wall Plug  $\phi$  6\*25
2. Wall Bracket
3. Screw ST 4\*30

## SHOWER PANEL INSTALLATION

1. Adjustment of water level  
This panel has three one-way, on-off diverters for showering and one thermostatic mixer temperature control. These three functions are: head shower, body jets and hand shower. This means you can shower with one, two or three functions operating at the same time.
2. Installation of the panel  
Determine hole positions. Drilling holes - refer to the sizes in the diagram (overleaf). Actual installing measurements should be determined according to the wall bracket behind the panel, to drill the holes in the wall and put in wall plugs. Hold the shower panel vertically.
3. Connection for hot and cold water.  
Use soft pipe to connect the shower panel to the joints for hot and cold water.
4. Fix the two wall brackets with 4 tapping screws (ST4\*30)
5. Adjust the wall brackets behind the shower panel so as to set the gap between correctly.
6. Hang the shower panel on to the brackets and fix the product to the wall with screws.
